Seamless Integration  
Optimized Collaboration  
MICI

# About

MICI is a tailored software solution supporting Airport Collaborative Decision Making (A-CDM) processes. It enables seamless and real-time data exchange between various airport systems, Eurocontrol, airlines, ground handlers, and other key stakeholders. This Java software application integrates diverse data sources into a unified workflow, facilitating efficient communication, optimizing operations, minimizing delays, and enhancing collaboration.

## Key Features

- ❑ Custom A-CDM Data Models and Connectors: Tailored for aviation-specific systems, ensuring data harmonization.
- ❑ Customized Dashboard and Alert System: Real-time visibility into metrics and sector-specific notifications.
- ❑ Predictive Analytics Engine: Proactively predicts delays and resource needs with machine learning.
- ❑ Security Enhancements: Compliance-focused security, including role-based access and advanced encryption.
- ❑ Automated Integration Health Monitoring: Ensures maximum uptime with continuous checks.

## Benefits

Optimized Operations

Reduced Delays

Enhanced Collaboration

Regulatory Compliance
